

## **Report group 45**

### **Estimate of each element's contribution to the work**

Henrique Anjos: 50%

Afonso Águas: 50%

In this project we made roughly equal contributions. We both dedicated an equal amount of time and effort to ensure the successful completion of the work.

### **Brief description of our options**

We believe that if a transducer was possible to be created by fst operations, we did. And that the .txt files we created were required.

To test the transducers, only the two required tests were done using method one. All the other testing was done using method number three, with all the required tests in the question “e.”, and some more tests we believe were important.

The python file word2fst was only used while doing the testing method number three.

We did not use the python file compact2fst.
